TOUCH SCREEN PROGRAMMING!!

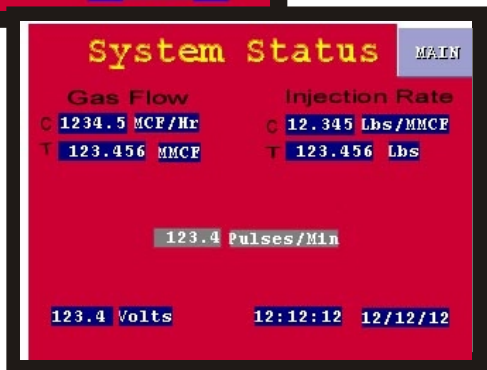

The Millennium Series One Pulse Gas Odorizer and Accu/Line Injection Systems now feature the latest in touch screen technology. On-Site programming is made easier by a simple touch of the screen. Long, detailed instructions and programming formulas are a thing of the past. With OdorEyes its just **point...touch...and go!!**

Easy to read visuals provide you with the ability to program, troubleshoot or monitor all aspects of the system.

Instantaneous visual confirmation of odorant left in the tank is just a touch away. Know how much odorant is left in the tank, how much has been used or even the tank temperature, without ever coming into contact with the odorant.

An audit trail records date, time, pounds of odorant injected, gas flow in MMCF, injection rate in lb/mmcf and tank level. Also recorded are the current gas flow in MCFH, current odorant flow in Lb/MM, current pulses/minute rate and battery

level. A record of alarms is stored for later display of the date and time the alarm occurred and the date and time it cleared. Eight different alarm sensors allow you to pinpoint the problem immediately.
